## Modern Glass Ltd Environmental Policy

The management of Modern Glass Ltd is committed to its nature conservation activity aimed at reducing the production's negative impact on the environment and makes the protection of the environment its priority. Key areas of activity in the sphere of environmental protection and safety are:

1. Compliance with the environmental legislation of the Russian Federation, standards and regulations in the sphere of ecology;
2. Establishing within the company an integrated system of activities aimed at ensuring environmental safety, reducing or keeping its negative effect on the environment on an acceptable level;
3. Rational use of material resources and energy;
4. Compliance with environmental requirements during production activity by its personnel.

**For the purpose of implementing the environmental policy principles, the top management makes the following commitments:**

1. To put into practice its operational decisions while taking into account the environmental aspects of its current and planned activities;
2. To take into account the changing requirements of the legislation, international principles and tendencies of environmental management and introduce them in the enterprise's activities;
3. To introduce into production energy saving practices, sustainable use of resources, as well as technologies that contribute to a reduced level of hazardous substances and waste formation;
4. To train its personnel in the sphere of ecology, increase their environmental awareness and competence;
5. To give preference to materials suppliers that have environmental safety as a priority of their activity.
